Second, a focus on practices (in the plural) avoids the mistaken impression that there is one distinctive approach common to all science—a single “scientific method” or that uncertainty is a universal attribute of science.

1. Introduction. Big data is widely recognized as referring to the very large amounts of data, both structured and unstructured, that organizations are now capable of capturing and attempting to analyze in a meaningful way so that data-driven decision analysis and actionable insights can be obtained.

In 3D computer graphics, 3D modeling is the process of developing a mathematical representation of any surface of an object (either inanimate or living) in three dimensions via specialized software. The product is called a 3D model. Someone who works with 3D models may be referred to as a 3D artist. It can be displayed as a two-dimensional image through a process called 3D rendering or used in a ...

- 4 - ABSTRACT Time series modeling and forecasting has fundamental importance to various practical domains. Thus a lot of active research works is going on in this subject during several years.

An Introductory Study on Time Series Modeling and Forecasting

The availability of detailed environmental data, together with inexpensive and powerful computers, has fueled a rapid increase in predictive modeling of species environmental requirements and geographic distributions.

Data mining is the process of discovering patterns in large data sets involving methods at the intersection of machine learning, statistics, and database systems. Data mining is an interdisciplinary subfield of computer science with an overall goal to extract information (with intelligent methods) from a data set and transform the information into a comprehensible structure for further use.

The latest global temperature measurements are available for both satellite data [3] and for the Hadley CRU temperature data [2], so I thought it would be interesting to compare these with the predictions made in 1990 by the first IPCC report.
