A programming language is a formal language, which comprises a set of instructions used to produce various kinds of output. Programming languages are used in computer programming to create programs that implement specific algorithms.. Most programming languages consist of instructions for computers, although there are programmable machines that use a limited set of specific instructions, rather ...

This lecture completes the introduction of classes by showing a way to implement user-defined iterators. It then discusses simulation models, and illustrates some of the ideas underlying simulations modeling by simulating a random walk.

### **Introduction to Simulation and Random Walks | Unit 2**

Computer programming is the process of designing and building an executable computer program for accomplishing a specific computing task. Programming involves tasks such as analysis, generating algorithms, profiling algorithms' accuracy and resource consumption, and the implementation of algorithms in a chosen programming language (commonly referred to as coding).
