These difficulties fall into four principal areas: defeasible reasoning (including the frame problem as apart), ordinary language (and the representation problems that it generates), the revision of beliefs (and its rules of inference), and knowledge representation (and the logical problems that are encountered there).

Representation Results for Defeasible Logic 257 transformation may be applied to a part of a program or theory without the need to notify or modify the rest. And incrementality says that if a theory has been transformed, then an update in the original theory should have cost proportional

Representation Results for Defeasible Logic

Defeasible knowledge representation and inference is useful because the system can appropriately handle most situations with conflicting facts and constraints. Chapter 6 ends with an explanation of the way conflicting facts and constraints are handled by the ARC Logic system.
