A biosafety level is a set of biocontainment precautions required to isolate dangerous biological agents in an  
enclosed laboratory facility. The levels of containment range from the lowest biosafety level 1 (BSL-1) to the  
highest at level 4 (BSL-4). In the United States, the Centers for Disease Control and Prevention (CDC) have  
specified these levels. In the European Union, the same biosafety ...

Insulin is a hormone that is produced and stored in the beta cells of the pancreas. It is secreted in response to elevated blood glucose following a meal and is vital for the transportation and storage of glucose, the body's main source of energy. Insulin helps transport glucose from the blood to within cells, thus helping regulate blood glucose levels, and has a role in lipid metabolism.

A medical laboratory or clinical laboratory is a laboratory where clinical pathology tests are carried out on clinical specimens to obtain information about the health of a patient to aid in diagnosis, treatment, and prevention of disease. Clinical Medical laboratories are an example of applied science, as opposed to research laboratories that focus on basic science, such as found in some ...
