In mass spectrometry, matrix-assisted laser desorption/ionization (MALDI) is an ionization technique that uses a laser energy absorbing matrix to create ions from large molecules with minimal fragmentation. It has been applied to the analysis of biomolecules (biopolymers such as DNA, proteins, peptides and sugars) and large organic molecules (such as polymers, dendrimers and other ...

A hierarchical core double-shell Ti-doped LiMnPO<sub>4</sub>@NaTi<sub>2</sub>(PO<sub>4</sub>)<sub>3</sub>@C/3D-G architecture is smartly constructed via in situ synthetic methodology, and exhibits outstanding rate capability and superior cyclic stability for advanced lithium-ion batteries as a competitive cathode, benefiting from synergetic contributions from the integrated design rationales.

Fructose is a 6-carbon polyhydroxyketone. Crystalline fructose adopts a cyclic six-membered structure owing to the stability of its hemiketal and internal hydrogen-bonding. This form is formally called D-fructopyranose. In water solution, fructose exists as an equilibrium mixture of 70% fructopyranose and about 22%

fructofuranose, as well as small amounts of three other forms, including the ...

Over the last few decades photonics has revolutionised telecommunications - not only the internet, but mobile telephony, would not exist in anything like their current forms, if at all, without the huge bandwidth unleashed by the deployment of optical fibre technology / photonics.

Posted: Aug 25, 2014: Nanotechnology in agriculture (Nanowerk Spotlight) Nanotechnology applications are currently being researched, tested and in some cases already applied across the entire spectrum of food technology, from agriculture to food processing, packaging and food supplements. In our special Food Nanotechnology section we have prepared an overview of this area.
