Microsoft Exchange Server is a mail server and calendaring server developed by Microsoft. It runs exclusively on Windows Server operating systems.. The first version was called Exchange Server 4.0, to position it as the successor to the unrelated Microsoft Mail 3.5. Exchange initially used the X.400 directory service but switched to Active Directory later. . Until version 5.0 it came bundled ...

Exchange architecture changes. Server role consolidation: In Exchange 2013 or earlier, you could install the Client Access server role and the Mailbox server role on separate computers. In Exchange 2016 or later, the Client Access server role is automatically installed as part of the Mailbox server role, and the Client Access server role isn't available as a separate installation option.

In Exchange server 2013 many changes have been made to simplify the process to manage the mail flow. In Exchange server 2010 we need to have separate hub transport server and separate edge transport server but in exchange server 2013, this is no longer needed and we don't need to install separate hub transport server and edge transport server.
