The short wavelengths of microwaves allow omnidirectional antennas for portable devices to be made very small, from 1 to 20 centimeters long, so microwave frequencies are widely used for wireless devices such as cell phones, cordless phones, and wireless LANs (Wi-Fi) access for laptops, and Bluetooth earphones. Antennas used include short whip antennas, rubber ducky antennas, sleeve dipoles ...

All-solid-state lithium ion batteries (ASS-LB) will gradually replace traditional liquid lithium ion batteries owing to the inevitable volatility and explosion safety problems in traditional liquid lithium ion batteries.

Mechanically, the cavity magnetron consists of a large, solid cylinder of metal with a hole drilled through the center of the circular face. A wire acting as the cathode is run down the center of this hole, and the metal block itself forms the anode.

Teledyne Microwave Solutions (TMS) offers a variety of analog controlled attenuators operating over a 10MHz to 26GHz range. With many units operating over many octaves, switching speeds less than 100nS and attenuation control up to 50dB, TMS has a product that meets your demanding needs.

Download this article in PDF format. Microwave energy is well known (and appreciated) by anyone who has used a microwave oven to heat a meal. Such application of high-frequency electromagnetic (EM) radiation for the dielectric heating of materials is also one of the most widely adopted industrial uses for RF/microwave components and systems.

Push-pull solid-state emitters with three different electron-donor groups and various electro-acceptor groups are described. – New electron-acceptor groups based on substituted 2(5H)-furanone rings are presented.. AIE and solid-state emission are reported, correlated with the presence of specific aggregates in the crystal structure.

Analog Devices RF amplifiers are designed using the company's leading amplifier and RF IC expertise.

The company's extensive family of single-ended, input/output, fixed-gain amplifiers can be used from low frequencies up to microwave and include gain blocks, low noise amplifiers, intermediate frequency amplifiers, driver amplifiers, and differentia

It went unmentioned at our large family Thanksgiving feast last week, but I am thankful that solid-state radar became omnipresent in our marine electronics world this year. In fact Gizmo's four test radomes now all share the solid-state virtues of near instant power up, low power draw, low emission levels, and long life (at least theoretical).

Our range of Low Noise Amplifiers (LNAs) cover a wide range of applications but are primarily suited to communication systems including both Data-Link and Satellite Communications (Satcom) systems. In recent years, LNA's have moved more and more into TMS's sweet spot, primarily due to the increase in operating frequency. For example, our new K-Band LNA operates over a 19.2 - 21.2 GHz with ...
