Introduction to Geostatistics | Course Notes

Multivariate statistics is a subdivision of statistics encompassing the simultaneous observation and analysis of more than one outcome variable. The application of multivariate statistics is multivariate analysis..
Multivariate statistics concerns understanding the different aims and background of each of the different forms of multivariate analysis, and how they relate to each other.

Multivariate statistics - Wikipedia

A fitted linear regression model can be used to identify the relationship between a single predictor variable x_j and the response variable y when all the other predictor variables in the model are "held fixed". Specifically, the interpretation of $\hat{\beta}_j$ is the expected change in y for a one-unit change in x_j when the other covariates are held fixed—that is, the expected value of the partial ...
