

### **signal processing first james pdf**

The most common processing approach in the time or space domain is enhancement of the input signal through a method called filtering. Digital filtering generally consists of some linear transformation of a number of surrounding samples around the current sample of the input or output signal. There are various ways to characterize filters; for example:

### **Digital signal processing - Wikipedia**

Tools used in analog signal processing. A system's behavior can be mathematically modeled and is represented in the time domain as  $h(t)$  and in the frequency domain as  $H(s)$ , where  $s$  is a complex number in the form of  $s=a+ib$ , or  $s=a+jb$  in electrical engineering terms (electrical engineers use "j" instead of "i" because current is represented by the variable  $i$ ).
