Signals and Systems

Featured Except from Signals and Systems using MATLAB Although it is hardly possible to keep up with advances in technology, it is reassuring to know that in science and engineering , development and innovation are possible through a solid understanding of basic principles .

Signals and Systems: A First Look 3.1 System Classiï¬•cations and Properties 2.1.1 Introduction In this module some of the basic classiï¬•cations of systems will be brieï¬,y introduced and the most important properties of these systems are explained. As can be seen, the properties of a system provide an easy way to separate one system from another.

Basics of Signals and Systems

More seriously, signals are functions of time (continuous-time signals) or sequences in time (discrete-time signals) that presumably represent quantities of interest. Systems are operators that accept a given signal (the input signal) and produce a new signal (the output signal). Of course, this is an abstraction of the processing of a signal.

We show also that any signal can be represented using basic signals (impulse, unit-step, ramp, complex or real exponentials, or a combination of these) which will permit us to highlight certain characteristics of signals and to simplify finding their corresponding outputs when applied to systems.
