This is a note to explain support vector machines. 1 Preliminaries ... A i a support vector (18) where we used y2 i = 1. So, using any support vector one can determine b, but for nu-merical stability it is better to average over all of them (although they should obviously be consistent).

â€¢ Support vector machines (SVMs) is a binary classification algorithm that offers a solution to problem #1. â€¢ Extensions of the basic SVM algorithm can be applied to solve problems #1-#5. â€¢ SVMs are important because of (a) theoretical reasons:
