Since organometallic compounds contain metals and ligands, the synthetic methods are in general grouped into two types: (1) reactions between metal species and preformed ligands or ligand precursors; (2) reactions of ligands in organometallic compounds yielding new ligands.

Synthesis of Organometallic Compounds - ScienceDirect

The reaction of a metal with an organic halide is a convenient method for preparation of organometallic compounds of reasonably active metals such as lithium, magnesium, and zinc. Ethers, particularly diethyl ether and oxacyclopentane (tetrahydrofuran), provide inert, slightly polar media in which organometallic

compounds usually are soluble.
